

AETHER

Design, Build and Launch of a Re-entry CubeSat

MARKETING: PR, BR & FINANCES

THE PROJECT

Aether is a team of motivated engineering students that have the ambitious goal of bringing the capabilities of sample return to the CubeSat platform. To succeed in this, we are first focussing on the creation of an inflatable heatshield. This is no easy feat, as the hypersonic re-entry creates a challenging environment for our satellite.

"A Cube-what?" you may ask. A CubeSat is a type of nanosatellite that comprised of small 10x10x10 cm cubes. This type of satellites is interesting as it is a 'cheap' platform to conduct research and testing in space.

We are currently looking for new people to join the team. You can join the team for one or two years in function of a Postgraduate program. The requirement: Having a bachelor's degree or higher.

FUNCTION

In this function you will be responsible for the public image of the team, maintaining the relation with the current partners of the team, as well as finding new ones and the creation of financial plan. Part of the public image is the making of marketing campaigns or events.

PROFILE

- Motivated team player
- Strong communication skills
- Extroverted/social
- Experience with social media

RETURNS

- Ability to connect with our partners in the space industry
- First-hand experience in working on a space mission
- Experience in marketing
- Experience in negotiations
